

Induction powder and fluid heating equipment

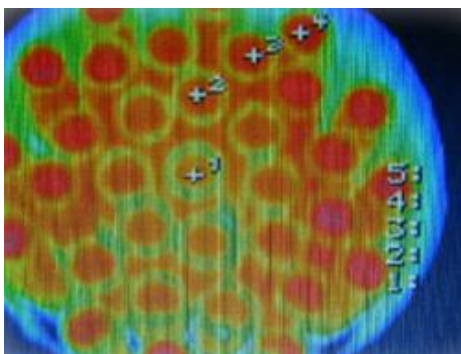

Our induction powder and fluid heater can be used for superheating steam and liquid, heat-treating soil, processing dioxin of fly ash, and other applications.

Features

- Heating elements have large surface area, providing efficient heat transfer
- Uniform heating throughout the system provides top-quality treatment
- Highly accurate temperature control

- Superheating of steam (superheated steam)
- Superheating of the liquid products (as a substitute for the heat exchanger)
- Heat treatment of soil
- Dioxin treatment of fly ash
