

Piping prefabrication (for lining)

When preparing for the lining process, special attention must be paid to weld portions, branch portions and flange inner-welded portions in order to assure the quality of the lining PVC. At DHF, prefabrication welds are designed to provide optimum surface conditions for application of polyethylene powder lining and other lining such as rubber and PVC. The entire process to the finished product is completed at one plant.

Benefits of integrated production

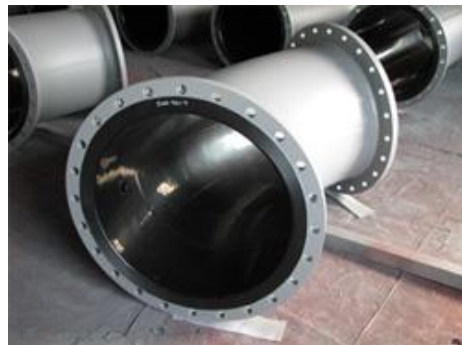

DHF's highly integrated production process completed under one-roof for top quality, cost reduction and ensures on-time delivery.
